

IN THE CLAIMS:

Claims 1 through 11 (canceled)

1 Claim 12. (New) A mountable light device comprising:

2 a front housing having a front and a back, said front comprising a lens and the back

3 adapted to be attachable to a back housing;

4 a back housing having a front and a back, the front being adapted to attach to the front

5 housing, and the back having two circular slots having outwardly extending flanges adapted to be

6 attached to rotatable knobs, and the front of the back housing may be attached to form an interior

7 compartment;

8 a first rotatable knob attached to one of the outwardly extending flanges of the back

9 housing;

10 a second rotatable knob attached to one of the outwardly extending flanges of the

11 back housing;

12 a mounting bracket extending outwardly from one of the front housing and the back

13 housing and adapted for attachment to another object;

14 a pivot mount having a reflector and a light bulb holder rigidly attached such that the

15 reflector and the light bulb holder project light in a light emanating direction when a light bulb is

16 placed in the light bulb holder and power is supplied to it, and wherein the pivot mount has a pivot

17 region and a pin attachment region opposite the pivot region;

18 a pivot mechanism rotatably attached to one of the front housing and the back housing

19 such that it may rotate about a first axis and having the pivoting attachment means adapted to

20 provide pivotal attachment to the pivoting mount such that the pivoting mount may rotate on a
21 second axis that is perpendicular to the first axis, wherein both the first axis and the second axis are
22 perpendicular to the light emanating direction;

23 a first pivot pin attached to the pivot mechanism and to the first rotatable knob
24 attached to the exterior of the back housing such that when the knob is rotated, the pin actuates the
25 pivoting mechanism to as to cause it to rotate about the first axis; and

26 a second pivot pin attached to the pin attachment region of the pivot mount and to the
27 second knob attached to the exterior of the back housing such that when the second knob is rotated,
28 the second pivot pin actuates the pivot mount such that it rotates about the second axis.

1 Claim 13 (New). The mountable light device of Claim 12 wherein the power source is located
2 within the internal compartment.

1 Claim 14 (New). The mountable light device of Claim 12 wherein the power supply is located
2 exterior to the front housing and back housing.
